

Dragon1 Enterprise Architecture Toolbox

Dragon1 Enterprise Architecture Toolbox is the 5-in-1 collaborative EA web tool suite supporting architects, (project) managers, policy workers, consultants and service managers in creating, visualizing, communicating and managing of architecture design and architecture principles for IT innovation and business transformations.

A web-based EA tool with the best service!

GIVE OVERVIEW AND INSIGHT TO MANAGEMENT USING COMMUNICATION ORIENTED ARCHITECTURE VISUALIZATIONS FOR BETTER SUPPORT OF STRATEGIC DECISIONS

What is Dragon1 Enterprise Architecture Toolbox?

Dragon1 Enterprise Architecture Toolbox is the architecture tool shaped as an online web tool for anyone who works within an organization on enterprise architecture, business architecture, information architecture, IT architecture and security architecture.

Since each organization is unique, you are expected to create and customize the right integrated architecture products that are of high quality so these can support the decision-making process.

A excellent architecture tool is based on an architecture method. Fitting your own particular vision of architecture. With Dragon1 Enterprise Architecture Toolbox you can formulate and address issues, create analytical solutions, model architecture and create products to communicate effectively. Dragon1 EA Architecture Toolbox is focused on the visual aspects of architecture.

With Dragon1 Architecture Toolbox you make architecture products for each stage in the architecture process. Your clients can make decisions based on the architecture visualizations. Engineers in projects use architecture in accordance with the visualizations, and systems, processes and services for better (re)build and deployment.

Dragon1

The innovative open method for visual enterprise architecture

5-in-1 online EA web tool

Dragon1 Enterprise Architecture Toolbox is a suite of five online web applications installed locally on your computer or your business network or intranet.

Key Benefits

- **Defining architecture policy** for the proper use of frameworks, norms and standards for working with architecture.
- **Creating architecture designs** for governance, business, information systems and IT infrastructure of an enterprise.
- **Publishing architecture visualizations** such as a design sketch, situation sketch, artist impression, structure vision, aspect vision and blueprint for owner/clients and engineers.
- **Govern basic architecture products** such as a specific architecture framework or domain model of your complete enterprise, the complete IT of a specific integral business function.
- **Using meta-models** as basis for creating architecture products, visualizations and models. This augments the exchangeability and collaboration of your enterprise.
- **Working with visual enterprise architecture and govern and control** a transparent architecture function for working with architecture.

Dragon1 Enterprise Architecture Toolbox

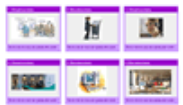

Visualizations

Here are some examples of screenshots with a short explanation on different types of visualizations you can create with Dragon1 Enterprise Architecture Toolbox:

Design Sketches

Visualizing how all concepts are put together and combined into one unified solution.

Situational Drawing

Detailed drawing of the evolution of situations. Also fit for storyboards and scenarios.

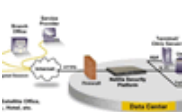

Artist Impressions

Overview drawing with details giving insight to all stakeholders on a lot of different situations.

Structure Visions

Visualizations of a complete organization with the most important domains plotted.

Aspect Visions

Blow-ups of designs of a domain enabling different needed situations.

Blueprint

Overview drawings with lots of detail showing all aspect vision of all domains at once.

Business Edition

This edition may only be used internally (non commercial) in the organization.

Consultancy Edition

This edition can be used both internally and externally (commercial).

By default the editions allow three enterprise architecture dossiers to be created for three organizations. Upgrades for more manageable organizations in the editions are available.

Contents of Dragon1 EA Toolbox

There are five web applications available:

- ▶ [Resource Center](#)
- ▶ [Architecture Repository](#)
- ▶ [Visual Designer](#)
- ▶ [Models Atlas](#)
- ▶ [Application Manager](#)

- **Resource Center is an e-policy tool** offering access to more than 250 digital files such as stepping guides, presentations, templates, reference models and visualization symbols editable to your own situation. Resource Center provides information on the method Dragon1 and usage of the method in the form of an online training.
- **Architecture Repository is an e-content management tool** for setting up and managing your own architecture administration. You have control over databases for reference architectures, the architecture designs, portfolio's of architects and the enterprise architecture and enterprise configuration. The meta-model used in the databases is editable to fit your own situation.
- **Visual Designer is an e-modeling tool** to support you in doing your core tasks such as creating professional architecture products. Use this tool to create architecture designs and architecture visualizations based on meta-models.
- **Models Atlas is an e-publishing tool** to publish the created architectures, architecture designs, scenario's and presentations on you intranet and internet through an build in automated mini-website. This enables you to communicate and present architecture more interactively for (project)workers and fellow architects.
