

# Dragon1 Enterprise Architecture Toolbox

Dragon1 Enterprise Architecture Toolbox is the 5-in-1 collaborative EA web tool suite supporting architects, (project) managers, policy workers, consultants and service managers in creating, visualizing, communicating and managing of architecture design and architecture principles for IT innovation and business transformations.

A web-based EA tool with the best service!

## ARCHITECTS ARE MORE PRODUCTIVE AND MORE EFFICIENTLY USING DRAGON1 ENTERPRISE ARCHITECTURE TOOLBOX

### Different Architects Collaborate

Dragon1 Enterprise Architecture Toolbox supports you as an architect in your core activities creating professional architecture products such as architecture designs, PSA's, glossaries, functional views, domain models, system rules diagrams, object models, situations sketches, blueprints and concept or principle sketches.

Dragon1 Enterprise Architecture Toolbox is a value-adding tool in the architecture practice for:

- the enterprise architect focusing on governance and innovation in an organization.
- A business architect focusing on changing needs in a companies business.
- An information architect focusing on adaptive and flexible information systems.
- A technical architect focusing on an open integral enterprise-wide IT infrastructure.
- A security architect focusing on security, safety and integrity of information for the whole of the organization.
- A solution architect focusing on integral solutions for the organization (such as CRM, SOA or BI).

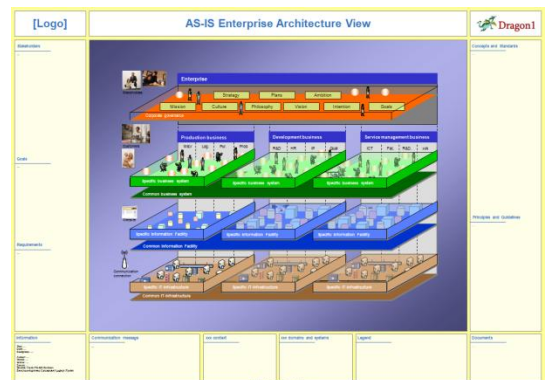

Figure 1: Example of an AO Artist Impression poster of a complete organization. This architecture visualization acts as a reference model in Dragon1 EA Toolbox and can also be customized to your needs and specific situation. Thus speeding up architecture results.

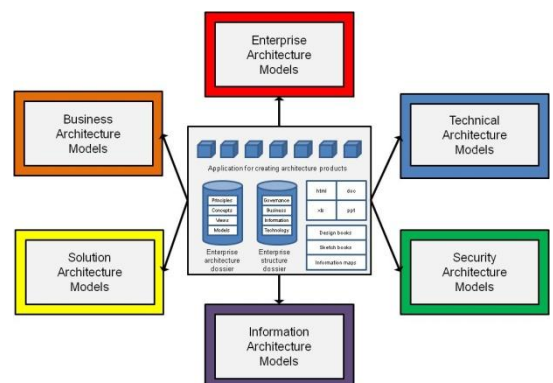

Figure 2: Dragon1 EA Toolbox enables different types of architects using the same meta-model, source, database or architecture dossier for better collaboration. Domain specific and generic terms, symbols and meta-models for different architectures and designs can now be aligned optimally. Conflicts in architecture are signaled automatically by Dragon1 EA Toolbox.
