

Dragon1 GenAI for Enterprise Architecture

Speed up Process & Application Overview & Insights, Digital Transformation, and AI Adoption of your organization by using Dragon1 Generative AI for Enterprise Architecture

Dragon1 is an Enterprise Architecture Solution for LMEs, and SMEs with advanced generation, and visualization features. It supports leadership, EA teams, and projects in effective transformation.

1. Use Dragon1 GenAI to design or generate real-time Business Capability Heat Maps, and Process Landscapes with Views, to understand, improve, optimize, and digitize your business.
2. Avoid oversimplification by distinguishing between Function Maps, Capability Overview Maps, and Capability Details Maps.
3. Use Dragon1 GenAI to design or generate real-time Application Landscapes, Data Landscapes, and IT landscapes with Views, that help you understand, manage, improve, and replace applications better.
4. Use Dragon1 GenAI to design or generate real-time Cyber Security Blueprints with Views, that reveal overlooked weaknesses, and help to improve the strengths.
5. Use Dragon1 GenAI to design or generate real-time Enterprise Architecture Blueprints with Views, to align processes, data, applications, and IT-Infrastructure.
6. Use Dragon1 GenAI to build your Digital Architecture Center for all stakeholders. This is the combined set of ai generated enterprise visualizations on Dragon1, published, and accessible, with supporting comments.
7. Use Dragon1 GenAI to start working with Enterprise Architecture effectively in 1 day.

Dragon1 AI Generated Enterprise Architecture Blueprint with views

Dragon1 AI Generated Process Application Landscape with views

Dragon1 AI Generated Enterprise Transformation Roadmap with views

Dragon1 AI Generated IT Landscape with interactive views

What is Dragon1?

Dragon1 is an online enterprise architecture platform (SaaS and on-premise) that supports organizations, leadership, and EA Teams to communicate, measure, manage, improve, document, design, and visualize their enterprise architecture. Dragon1 covers all architectures, such as business architecture, data architecture, application architecture, IT architecture, security architecture, and solution architecture. By working with EA the Dragon1 way, organizations can effectively execute business innovation, information planning, and digital transformation.

What is Dragon1 GenAI?

Dragon1 Generative AI is the new version of Dragon1 where AI machine learning techniques are used (such as fuzzy pattern matching, distant metrics, similarity learning, and geometrical knowledge graph learning) to generate better and more effective blueprints, landscapes, roadmaps, and documents using your data from external systems, JSON REST APIs and uploaded documents like Word, PowerPoint and Excel files. Dragon1 makes use of editable visualization templates and reference models. Dragon1 can get any other unused tool used.
