

Dragon1

Company Profile

Dragon1 is an Enterprise Architecture Management platform to collaborate on Enterprise Transformation and Innovation

Dragon1 Inc.

Dragon1 Inc. is the saas software company, headquartered in the Netherlands, that develops and markets the Dragon1 Enterprise Architecture Management Software Tools, as well as the open EA method, and related eLearning / training courses. Dragon1 is used all over the world in over 100 countries, in projects by Business and EA teams.

We closely collaborate with consultancy & training firms and independent contractors, to be able to deliver a local best fitting solution for the end-user company. Also, we do research using SHARK, our software development method, in close relationship with our clients. We call that Open Innovation.

Our History

In 2005 Dragon1 Inc. started as a consultancy & training organization. However, the way we have practiced enterprise architecture has been different from the rest: with a strong analogy to building architecture.

This new way of thinking, called Visual Enterprise Architecture, we have been used to develop the Dragon1 open EA Method. In 2013, internationally recognized as an open EA method. On top of that, it required also a new way of working, software for modeling Enterprise Visualizations.

This brought to start developing Dragon1 as a Collaboration Platform of which the Enterprise Architecture Tool, BPM Tool, ArchiMate Tool, UML Tool and Togaf Tool are the first product lines in this product family.

Software as a Service Solution

Dragon1, via www.dragon1.com, enables business professionals and organizations to create decision-making visualizations for large transformations and innovation in a visual and effective way, to adapt constantly to new organizational technologies and to respond to social and economic challenges.

On the platform, people visualize concepts, principles, standards, rules, business processes, business models, IT systems, strategies, applications, data, patterns, goals, mission, vision, and much more, to gain insight and overview of the desired and undesired cohesion and dependencies inside or outside their organizations.

With these enterprise overviews, users analyze, measure, discover, solve and manage (via dashboards and reference models) issues, weaknesses and risks. For example, what and where are the security risks in the IT infrastructure?

Our Vision

We have a clear vision on four topics: people, organizations, knowledge and information.

People often have unused capabilities and competencies

Our vision on people is that they need, can and should be better relocated in organizations using their capabilities and competencies optimally.

Organizations need to use people & information more effective

Our vision of organizations is that they need to use people and information much more effective in order to survive the competition. That even goes for governmental organizations.

Knowledge needs to be made reusable

Our vision on knowledge is that knowledge present in people's heads and in organizations is not as reusable as it should be. If made more reusable knowledge can be used as a competitive edge.

Information can be of strategic impact

Our vision on information is that most organizations really do not know how they can use the information for their own benefit. If used properly, information (of course made visually) will be of a significant impact because it is used to support every strategic decision to be made.

Our Mission

We enable EA practitioners to engage the business and CxOs. Business outcomes are the key focus of EA. You need business people, business language and business visuals to achieve this.

Our Values

We focus on the values of people in organizations. People's values are: professionalization & knowledge creation. Organizations' values are: sustainability & information as a key production factor.

Our Ambition

We want to become Dragon1, in three years, the visualization standard solving architectural, organizational and economic issues at a strategic level in large and medium companies.

Our Drive

We are busy to increase the comfort, ease of use, control and benefits of the software. To enable people and organizations in analyzing, decision-making and managing with the visual products to excel in enterprise performance.
