

# Dragon1 EA Tool Pilot Program

Collaborate with cross-domain virtual teams to add value to projects

Start with your Customer Value Propositions. Align and manage visually strategic visions to execute priorities

Interconnect your landscapes, blueprints and roadmaps, no organizational cognitive dissonance

## Dragon1 Pilot Program

Introducing Dragon1 as new or as replacement Enterprise Architecture Tool to your organization

*The Dragon1 Pilot Program is the most effective way to experience the added value of Dragon1 as Enterprise Architecture Tool in your organization by means of an initial roll-out*

### Why Do A Dragon1 Pilot Program?

The purpose of this Dragon1 Pilot program is to test and see in practice and in production as organization that Dragon1 delivers added value.

Reading in a brochure that Dragon1 will help increase business capabilities, lower IT costs, help standardizing processes and applications, is not as half as convincing than experiencing it in practice in your organization.

Becoming a digital company today, is a big challenge for every organization. A lot of transformations need to take place for that. And to ensure the transformations do strengthen each other, more and more often the instrument of enterprise architecture is used. Dragon1 is a specialized tool for this to be successful.

Settings goals, checking progress and directing projects towards an outcome that benefits the business is very hard to do these days. With Dragon1 you are having already a head start.

### Main Benefits

The main benefits of running a Dragon1 Pilot Program in your organization are:

- Collaborating up-front to shape what and what not becomes a project (concept pictures, re-use opportunities, guidance, peer reviews)
- Importing and re-using data from other tools to get an agile organization
- Building Target Architectures on top of your Strategy during the pilot
- Monitoring and Managing Projects Visually during the pilot
- Increasing Capabilities and Lower Costs of your Processes and IT

Dragon1 is a specialized online Enterprise Architecture Tool for transforming organizations into smart and lean digital companies. More information on the Dragon1 system can be found on <https://www.dragon1.com>

The Dragon1 Pilot Program is a series of one or more projects to do an initial roll-out of the system into production, targeting a limited scope of the intended final solution.

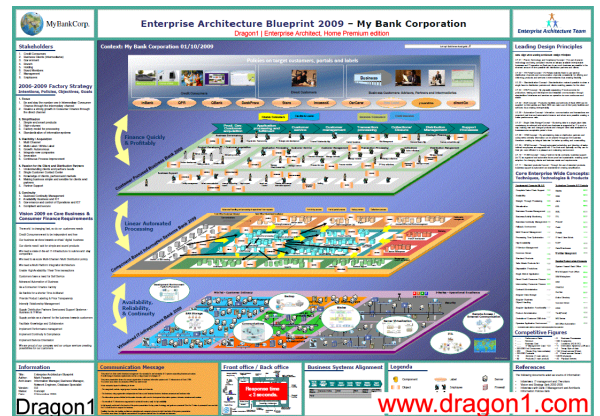

Figure 1, Enterprise Architecture Blueprint

Example of an interactive Enterprise Architecture blueprint at A0 size, that can be accessed digitally by stakeholders on their PC, Laptop, Tablet PC (iPad) or Smartphone (iPhone).

*This interactive visualization was created on Dragon1 by importing data from Microsoft Excel into the repository and linking the data in to a model. Next the model was connected to standards views. Finally the visualization was generated using the Architecture View Layout from the Dragon1 open EA Method. Every area on the canvas shows the contents of a different view from the same model.*

# Program Phases

The Dragon1 Pilot Program consists of the four phases of the Deming Circle:

## 1. PLAN & PREPARE

First we define the length and scope for the pilot program and its projects, select the pilot team and program manager and set goals to achieve and build a planning.

The scope may be limited by the number of users who can access the system, the business processes affected, the business partners involved, or other restrictions as appropriate to the domain.

Some organizations prefer to have their preferred supplier for EA consultancy to take the lead in this pilot program and other organizations want us to take the lead, and a few take the lead themselves. It is up to you to make the best fitting choice for your pilot program.

De members of the pilot project preferable are creative, loyal and ambitious employees, experienced or unexperienced.

The goals to achieve are creating interactive architecture visualizations that can be used by stakeholders to set business goals, take business decisions, check transformation progress and direct projects. In other words: to manage with the visualizations.

The preparation activities in this phase are things like setting up the repository, creating a dossier structure for the project team, setup work processes for the project team and importing data from other tools, like application for IT Portfolio Management, Business Process Analyses and your current EA Tool. We will take care of most of the preparation work.

## 2. DO

In this phase people carry out the planning, creating the interactive architecture visualizations together with the stakeholders. Next they publish the visualizations to the devices of the stakeholders enabling them to do their management with the visualizations. For instance on their Tablet PC or Smartphone like an iPad or iPhone.

To get to know the system we can provide face-2-face and elearning training courses on top of our self-service Dragon1 Help.

Anytime of the day and anywhere users (Architects, Managers and Other Stakeholders) can rely on the Dragon1 Service Desk for functional and technical support.

On a weekly basis the account manager of Dragon1 contacts with the program manager and client/owner of the pilot to monitor the program.

## 3. CHECK

In this phase the account manager, client/owner and program manager evaluate the results together with the users of Dragon1.

Lessons learned and feedback is used to improve the setup of Dragon1, training, service and support. Optionally one or more new pilot projects are started up.

## 4. ACT

In this phase the account manager and client/owner define the plan to scale up the implementation of Dragon1 in the organization if the pilot projects were successful.

# Landscapes, Blueprints and Roadmaps

In the Dragon1 Pilot Program users will create landscapes, blueprints and roadmaps to design the digital company in a holistic and integral way. The users can work efficiently together on these architecture products from different locations, even in different countries, because Dragon1 is cloud based software.

Other users can use these created interactive visualizations to execute the strategy, architecture and transformation of the organization.

Managers, directors and other stakeholders will be able to set goals, check progress and direct projects using the interactive visualizations on their own devices, like iPad and iPhone.

They can also give feedback to the architects via messaging on the Dragon1 platform on how to improve the visualizations for better usage.

## Becoming a Launching Customer

We like to invite you not only to become a client, but even more to become our launching customer.

After starting the pilot we like to mention you as our launching customer in our communication and refer to you for other potential clients that show serious interest in our system: Dragon1.

Becoming a launching customer creates a podium for both of our organizations to show that we are innovating and applying new technology to improve the performance of our organizations. As client and supplier.
