

How To Use Dragon1 To Speed Up Digital Transformation As Catalyst For Sustainable Organization Models, Generating diagrams and a bit of AI

PoEM 2023, The Practice of Enterprise Modeling
TU Wien, November 29, 2023

Mark Paauwe, Dragon1
mark.paauwe@dragon1.com

What is happening?

Vienna

New York

Every day around the world in 100+ cities directors, managers, professors, students and others need to get insights and overview for their goals and projects.

100+ cities have a population of 4 million people or more, with related population challenges.

London

Paris

What is Dragon1?

Vienna

New York

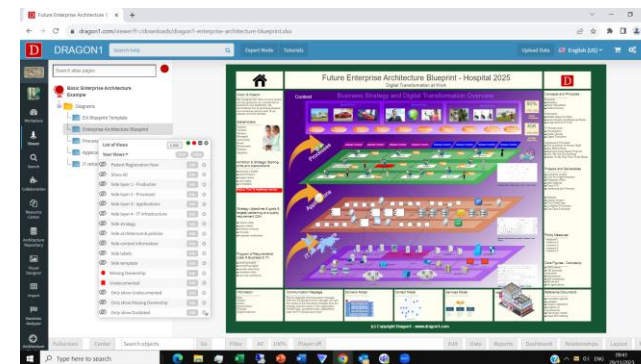

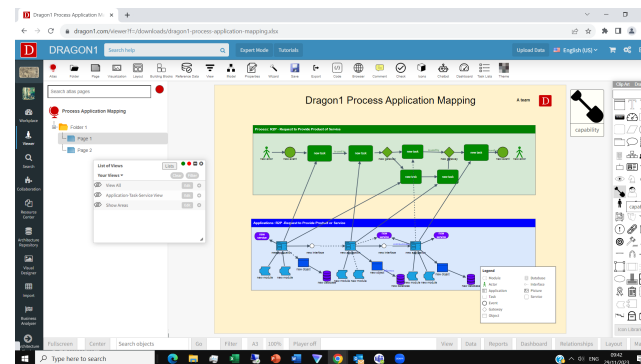

Dragon1 is aiming to be the tool that people in 100+ cities find easy and nice to use daily to create architecture models and generate achitecture visualizations with.

London

Paris

What do users do?

Vienna

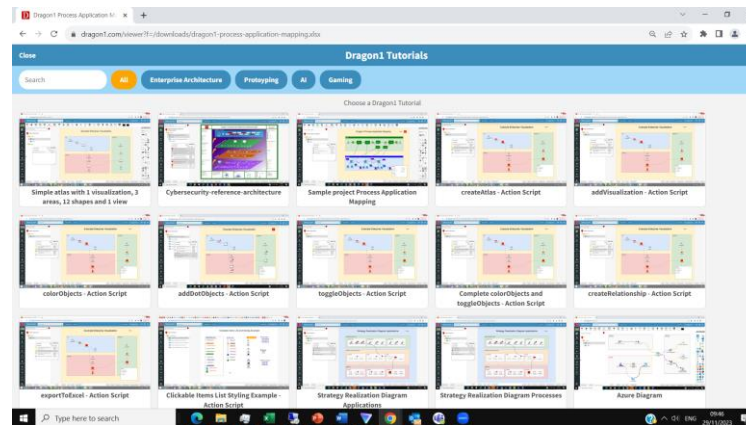

London

In order to get insights and overview users only have to go to the Dragon1 Viewer, select a tutorial and edit it to their liking and provide their data to Dragon1

New York

Tutorials screen in the Dragon1 Viewer, with tutorials in Excel Sheets, JSON, XML and CSV

class	id	name	classType	image	width	height	descr	datastatus	responsible	startdate	enddate	link	linktitle	datasource	importance
application	10	Monitoring Application	Application	/images/application-cube.png	50	50	This is a n Proposed	01 jan 2023	31 dec 2025					Strategic	
application	20	MFA Application	Application	/images/application-cube.png	50	50	This is a n Proposed	01 jan 2023	31 dec 2025					Strategic

application	100	Antivirus Application	Application	/images/application-cube.png	50	50	This is a n Proposed	01 jan 2023	31 dec 2025					Strategic	
application	110	New Application	Application	/images/application-cube.png	50	50	This is a n Proposed	01 jan 2023	31 dec 2025					Strategic	

Excel sheet with client data that can be uploaded in the Dragon1 Viewer and linked to a tutorial or visualization template.

Paris

What about Cybersecurity?

Vienna

Suppose people from an organization need to know how mature or completely implemented their cybersecurity capabilities are and where there is business debt and technical debt slowing down innovation or preventing transformation?

London

New York

Then they could choose to generate a cybersecurity landscape and measure their data and situation against an editable Cybersecurity Architecture Framework on Dragon1.

Paris

People are able to collaborate on Dragon1

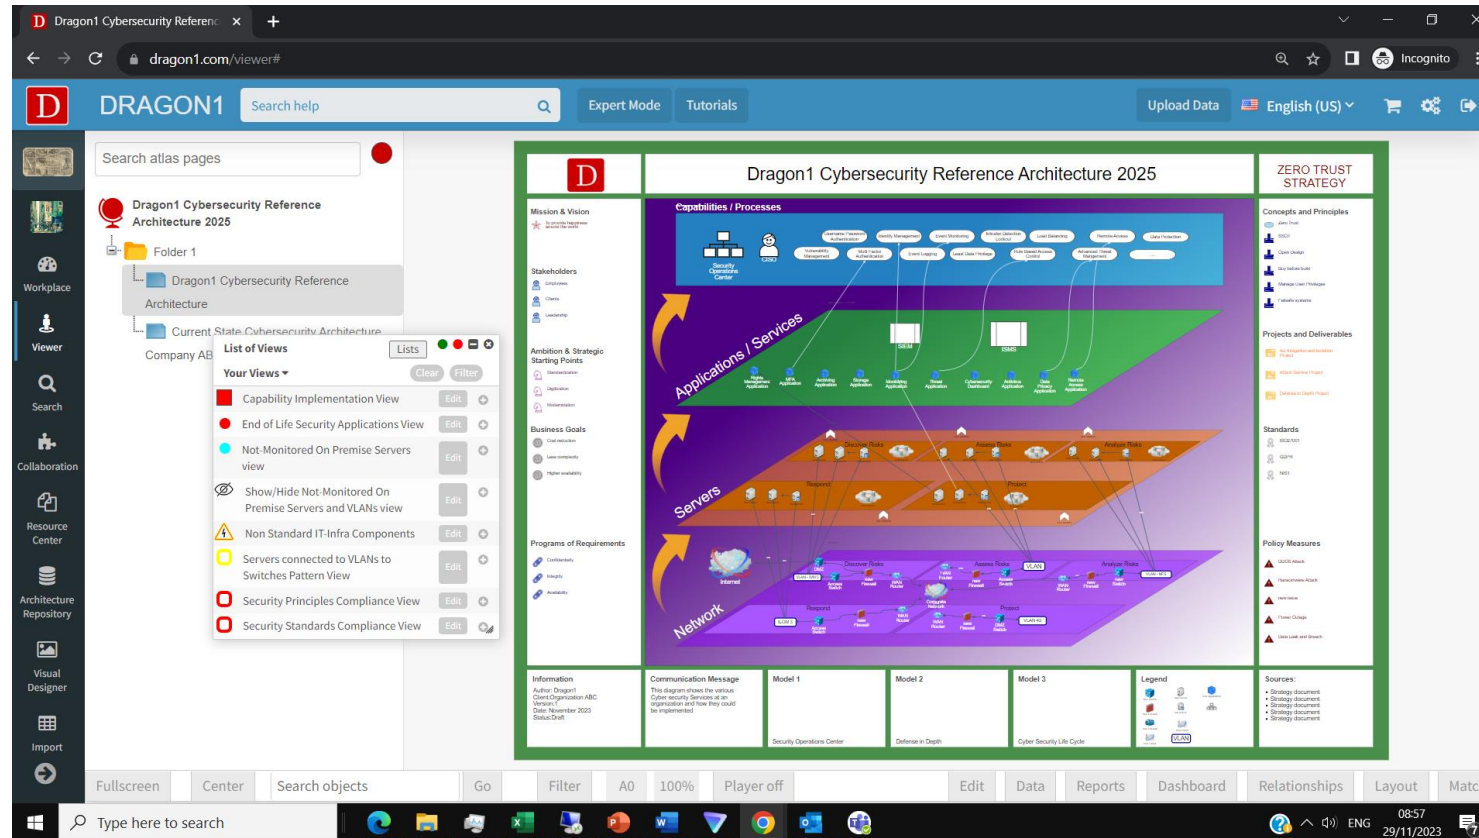

Vienna

Create/Edit
Visualization
Template

New York

Create/Edit Framework
Models & Rules

The Dragon1 Viewer generates clickable/interactive diagrams from one or many datasources (databases, apis or files) and its own repository.

London

Collect Client Data

Example Tutorial

Example Language and Method Specification

Dragon1 supports to specify your own language or method with metamodel rules, icons and patterns.

Watch and download the example tutorial in the Dragon1 Viewer on creating your own language or method.

- **Example new metamodel**

- `{class:metamodel,id:1,name:mymetamodel,type:reference model}`

- **Example new entityclass**

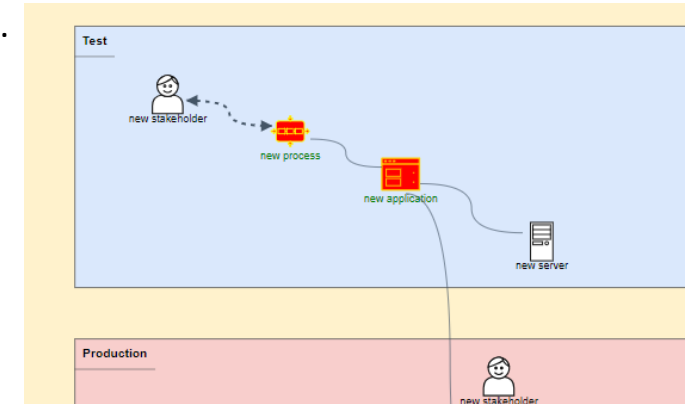

- `{classname: myclass1, classattributes:{id:integer(18,0),name:string(varchar,255), icon:/images/myclass1.svg}, metamodelid:1,cardinality:0, fill:white,stroke:blue,strokewidth:5, color:blue}`

- **Example new relationship**

- `{classname: myrelationships, metamodelid:1, classattributes:{id:integer(18,0), name:string(varchar,255), fill:white,stroke:blue,strokewidth:5, color:blue, sourceclass:<classname>,sourceid:integer(18,0),targetclass:<classname>,targetid:id:integer(18,0), ...}, text:string(255), cardinality:1, icon:/images/myrel.svg}}`

- **Example new rule**

- `{class:rule,id:1,name:rule1,eventtrigger:on(draw),eventaction:cancel(draw), eventrule:myclass1 is connected to myclass2}`
- `{class:rule,id:2,name:rule2,eventtrigger:on(load),eventaction:delete(entity), eventrule:myclass1.age <= 18}`
- Event options: load, draw, create, read, update, delete
- Operator options: is connected, is not connected, is, and, or, xor, =, &&, ||, <>, <, >, <=, >=
- Wildcards: * (any character), ~ (starts or ends with)

Fuzzy Pattern Logic
(with tolerance)

Example
Tutorial

Example Pattern Specification

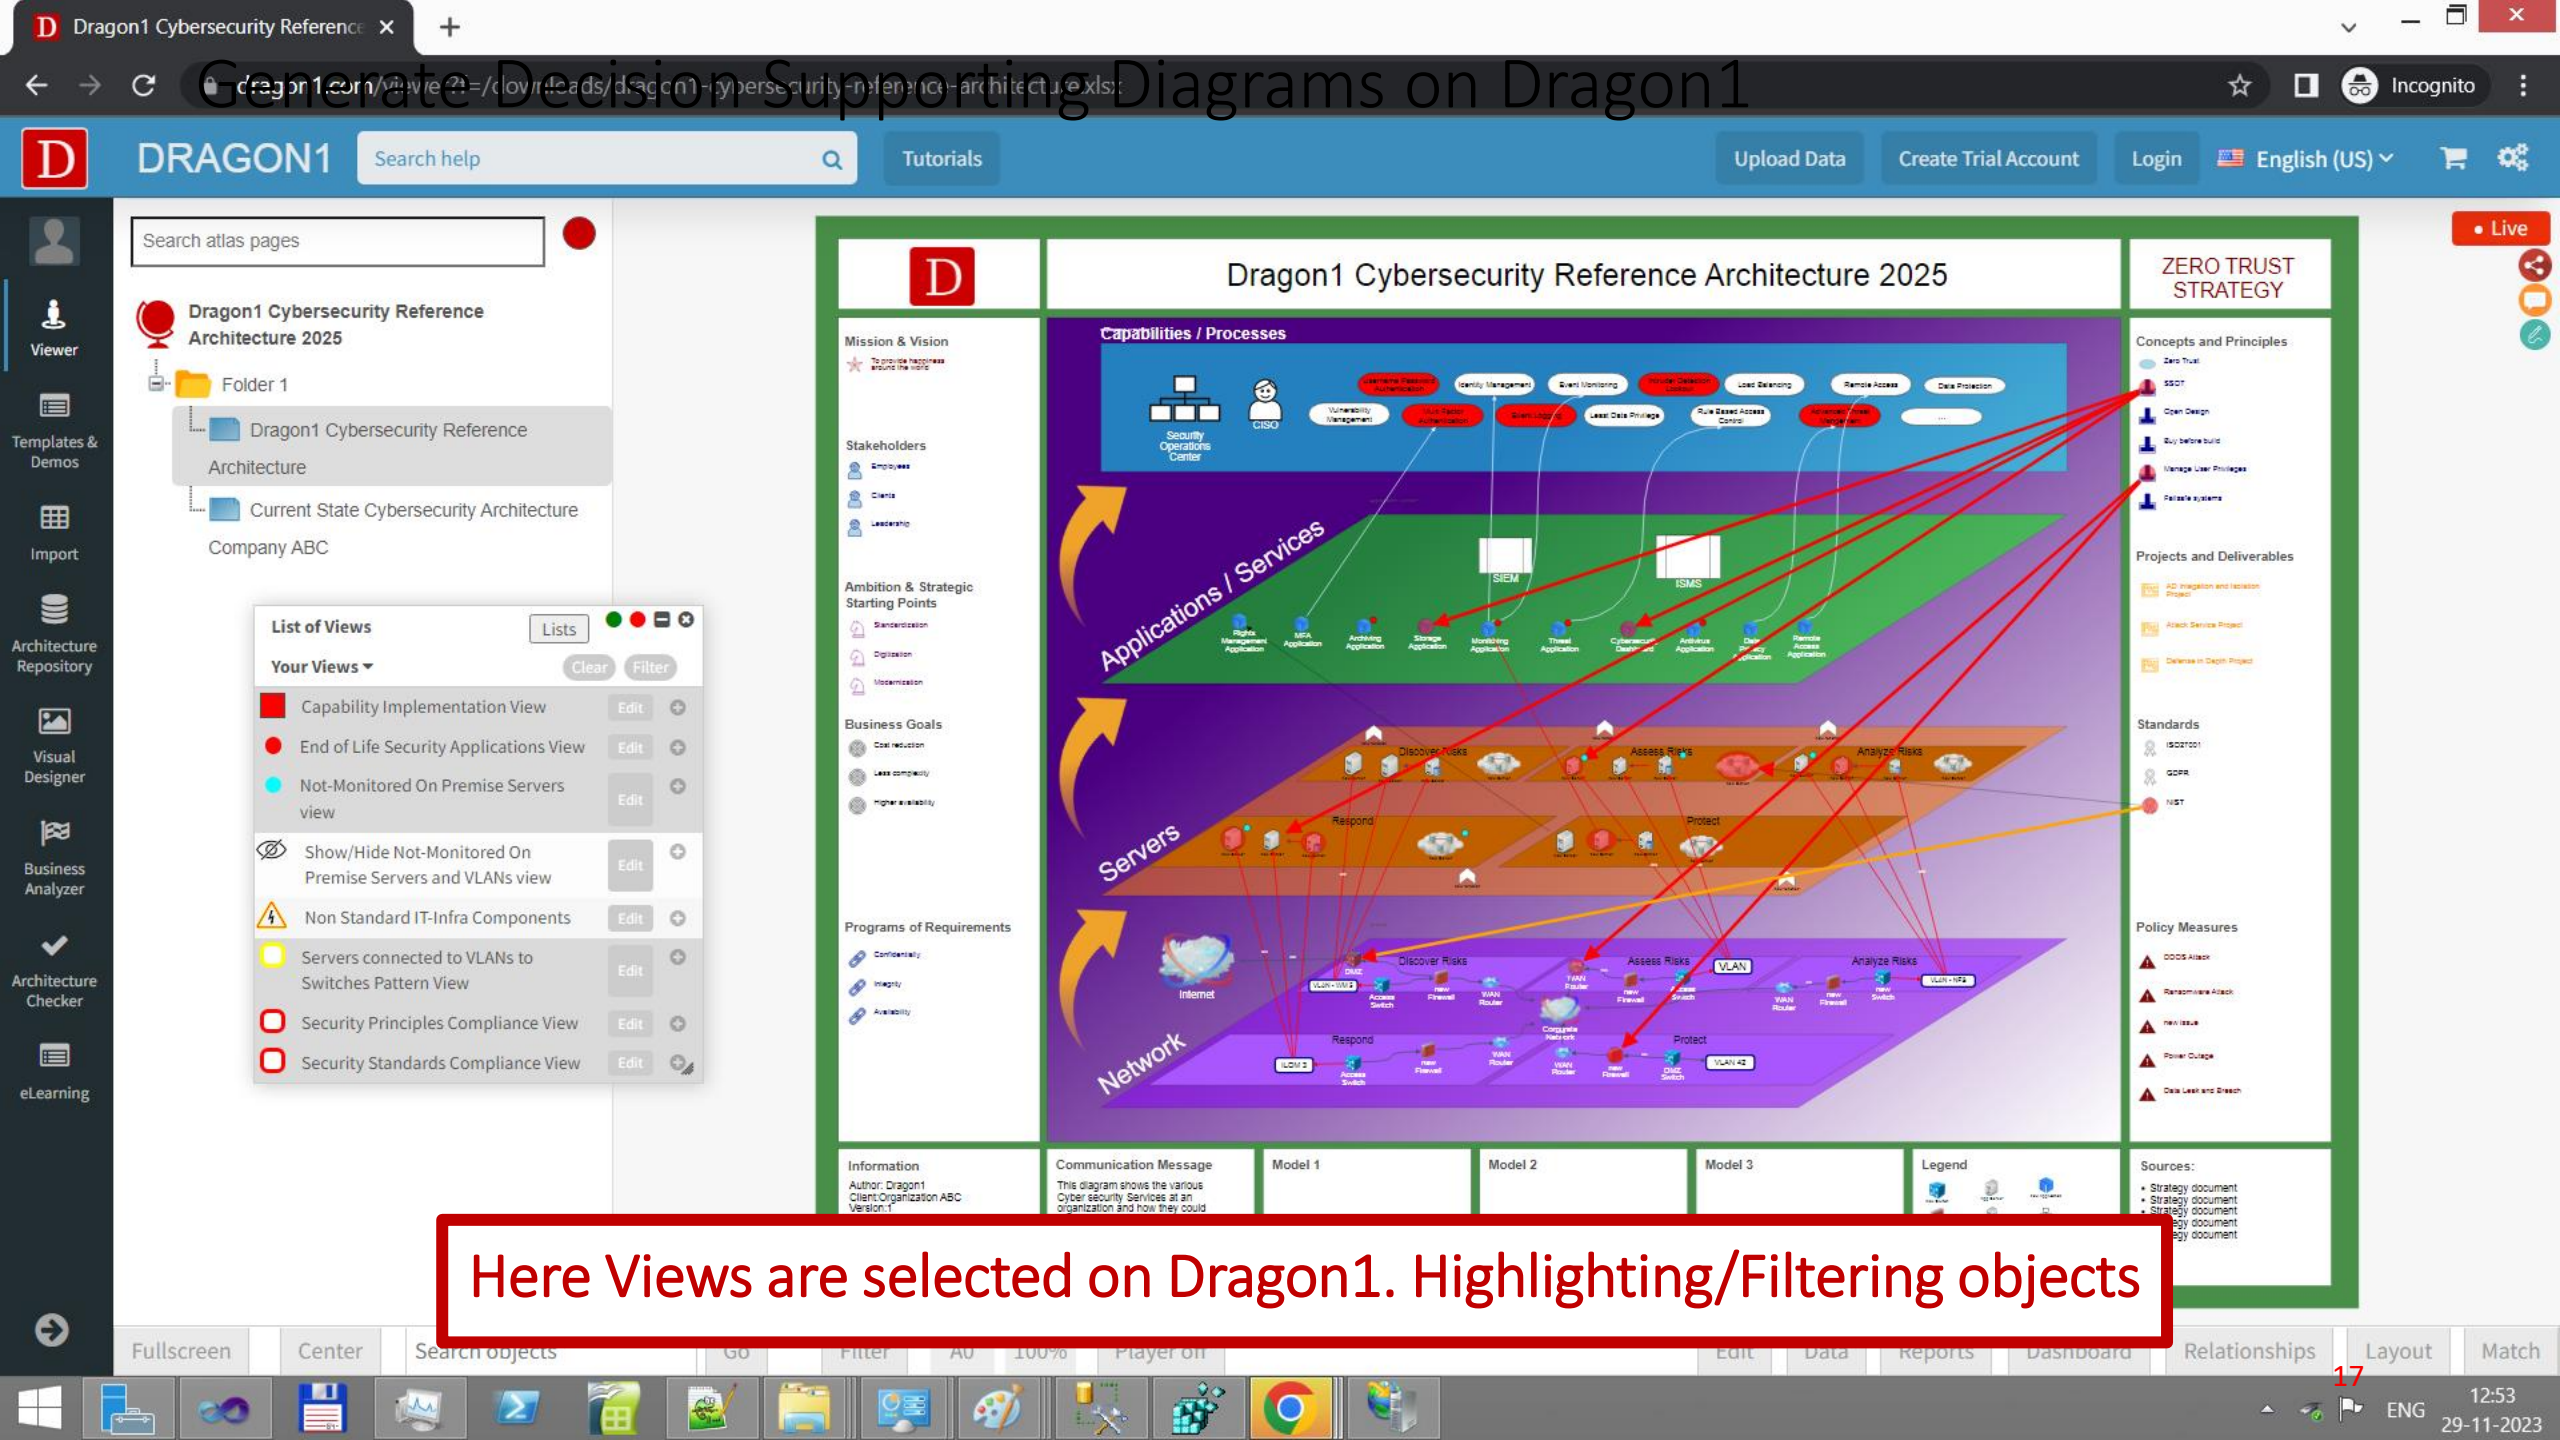

- A model is a coherent set of related entities
- Examples of Entities are:
 - {**Class:**Product,**Id:**10,**Name:**Product1,**Type:**Business Product}
 - {**Class:**Service,**Id:**20,**Name:**Service1,**Type:**Business Service}
- Example of a Relationship is
 - {**Class:**Relationship, **Id:**1,**Modelid:**1
Sourceclass: Product, **Sourceid:** 10, **Sourcecardinality:**1
Targetclass: Service, **Targetid:** 20, **Targetcardinality:**0..3
Routingtype: curved, **Type:** Flow, **Text:** Is Used by}
- A pattern is a coherent set of included or excluded related entities and linked relationships
- Example of a Pattern Specification is:
 - Pattern:[{**class:**pattern,**name:**pattern1,**id:**1, **descr:**'This is a pattern'},
{**patternid:**1,**class:**product,**id:***,**name:**pro*,**type:***,**include:**no,**tolerancevalues:**{type:{business,IT}}}, {...},
{**patternid:**2, **class:**relationship,**id:**1,**sourceclass:**product,**sourceid:***,**targetclass:***,**targetid:***,
sourcecardinality:1,**targetcardinality:**0..3,**type:***,**include:**yes,**relationshiplinkids:**{2,4.9},**tolerancevalues:**{}}, {...}, ...
